

IPS Regulator Broom Elements

***Part: 175955, 175955-B
BKE200, 175955-W***

Description: **175955** Also known as a 'Whisker', this fiber-reinforced rubber element is designed for the repeated punishment involved in clearing ballast from ties during track maintenance.

175955-B The "Ballast Broom" whisker is designed with a flared end to increase both the wear life and the impact force of the broom.

The **BKE200** Knocker element is similarly designed for Ballast Regulators but is

reinforced with a heavy-duty, securely crimped steel "Knocker" at one end. This augmentation provides increased durability and longevity for the broom element as well as greater momentum for heavy or frozen ballast clearing.

175955-W Capped Wire Broom Element is a 1-1/2" diameter x 12-1/2" long capped wire broom whisker with one 1-1/2" diameter x 3" long metal tube crimped onto each end.
